Specification

The disclosure is objected to because of the following informalities: on pages 2, 5, 6, 7, and 11, it is requested that Applicants supply all appropriate patent numbers corresponding to cited application numbers. As an example, on page 2, lines 18-19 should recite, --U.S. Patent Application No. 08/519,146, filed August 24, 1995, now U.S. Patent No. 5,795,390--.

Appropriate correction is required.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claim 1 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 1 of prior U.S. Patent No. 6,214,117. This is a double patenting rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Pfost et al (US 5,104,621).

Pfost et al teach a dispensing system for dispensing material on a substrate, the system comprising a frame (workbench or base 12), a support (28), coupled to the frame, that supports the substrate (26 or 27) at a dispensing position in the dispensing system, and a dispensing head coupled to the frame, that dispenses the material onto the substrate, the dispensing head including a motor unit (130) having a first motor coupled to an output drive mechanism (132), and a dispensing unit (240), removably coupled to the motor unit, having a material outlet from which the dispensing material is dispensed, the dispensing unit having a dispensing mechanism coupled to the material outlet and coupled to the output drive mechanism of the motor unit such that operation of the first motor causes the dispensing mechanism to dispense material through the outlet (see Figs. 1, 2, and 7-10; see col. 19, lines 21+). Also see alternative embodiment in Figs. 11A and 11B where the removable dispensing unit includes plural outlets.
